BULL MOWER

OREC

Faster. Stronger.

ZHR800

For Professional

Zero-Turn Stand-On Flail-Mower

The concept of the ZHR800 can be summarized in one phrase: “Combining the best of Walk-behind and Ride-on mowers.”

The design and the specification are subject to change.

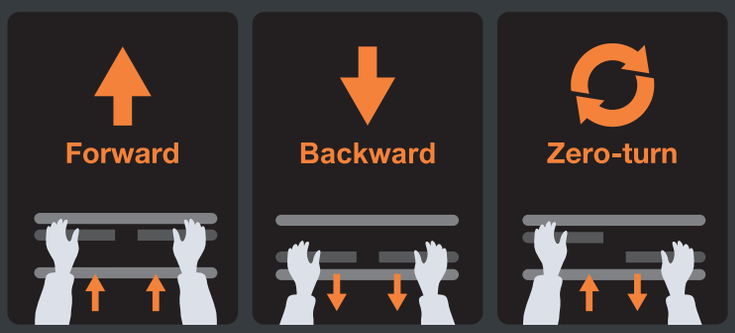

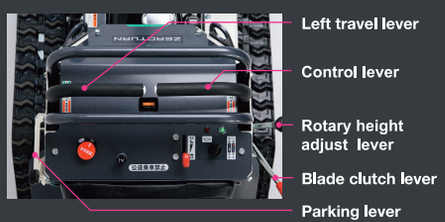

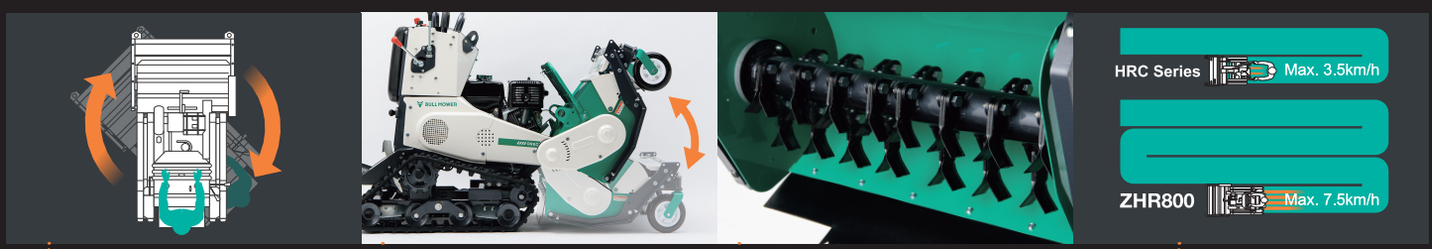

Operation

Perfect Sense

The simple operation ensures a stress-free experience, providing you with a comfortable and efficient work.

POINT

Zero-turn operation

Independent left and right HSTs make possible zero-turn operation. Smooth, waste-free travel eliminates the stress of reversing direction and other maneuvers.

POINT

Maintenance Position

When replacing blades or cleaning inside of the cutting deck, it is easy and effortless to work in this maintenance position by lifting the rotary deck up.

(WARNING) Cutting grass in this position is NOT ALLOWED.

POINT

High-durability flail blades and rotary cover

●Flail blade
Utilizing wide and thick blades that are COR-TEN processed makes it minimize chipping and broken, thereby extending the blade's lifespan

●Rotary cover
The rotary cover features COR-TEN steel, which is resistant to corrosion and rust, ensuring exceptional durability.

POINT

Efficiency is the key.

The combination of HST mechanism, zero-turn capability, and a top speed of 7.5 km/h not only allows for more delicate operation but also delivers approximately twice the cutting efficiency compared to the current HRC series.
